Flutter:

Drawer : We can customize drawer.

1. Create widgets folder and also create a **drawer.dart** file inside widgets folder.
Example : MyDrawer and update homepage.dart file.

2. In Drawer we have added Image from Network and add name and email.

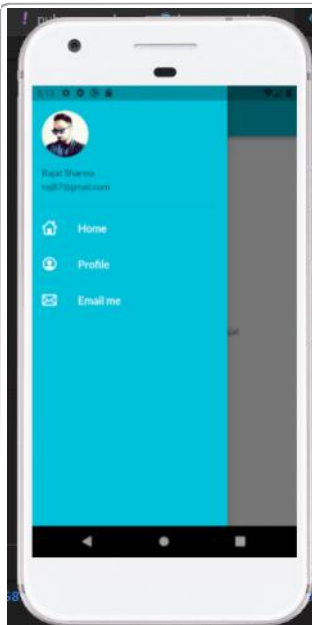

3. DrawerArea fill with color.
ListView Wrapped with Container.

Code added :

```
return Drawer(
  child: Container(
    color: Colors.cyan,
    child: ListView(
```

4. We can use ListTile for Home, Profile etc

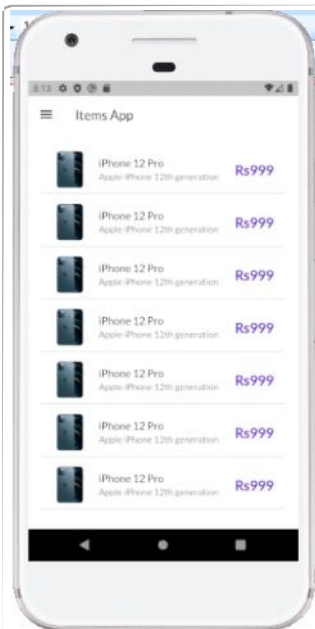

```
ListTile(
  leading: Icon(
    CupertinoIcons.home,
    color: Colors.white,
  ),
  title: Text(
    "Home",
    textScaleFactor: 1.2,
    style: TextStyle(
      color: Colors.white,
    ),
  ),
),
ListTile(
  leading: Icon(
    CupertinoIcons.profile_circled,
    color: Colors.white,
  ),
  title: Text(
    "Profile",
    textScaleFactor: 1.2,
    style: TextStyle(
      color: Colors.white,
    ),
  ),
),
ListTile(
  leading: Icon(
    CupertinoIcons.mail,
    color: Colors.white,
  ),
  title: Text(
    "Email me",
    textScaleFactor: 1.2,
    style: TextStyle(
      color: Colors.white,
    ),
  ),
),
)
```

5. We have update the **AppBar** color as same as screen color.
Update main.dart with AppBarTheme

```
theme: ThemeData(
  primarySwatch: Colors.cyan,
  fontFamily: GoogleFonts.lato().fontFamily,
  appBarTheme: AppBarTheme(
    color: Colors.white,
    elevation: 0.0,
    iconTheme: IconThemeData(color: Colors.black),
  )),
```

6. We have print Items in card Widget.

Code committed in FlutterPartFive.
